The following is an Examiner's Statement of Reasons for Allowance: The Prior Art of Record does not disclose nor suggest the claimed combinations found within Independent Claims 1, 8 and 15. Ker et al. (US 2004/0233595 A1) discloses in Figure 12B an ESD circuit having stacked FETs (1222, 1221) with diodes (126) coupled to the gates, and inverter (1224,1223) with an RC circuit coupled to the input. However, there does not appear to be strong motivation for exchanging FET (1222) with an NMOS FET so as to obtain a stacked NMOS transistor pair as required by the claim language, especially since PMOS (1222) and NMOS (1221) form a CMOS inverter. Secondly replacing one conductivity-type transistor with an opposite conductivity-type transistor within a single circuit might become obvious if all transistors were to be changed, not just one of many. There also does not appear to be strong motivation to re-arrange the diodes (126) so as to be a first diode string coupled between the gates of the first and second transistors as required by the claim language. Independent Claims 1 and 15 further require the use of a second diode string. It is the opinion of the Examiner that the instant Claims are novel and unobvious in view of the Prior Art of Record.

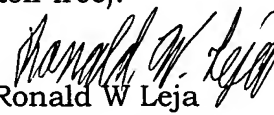

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
